

PRESTYL CUSTOM IMAGE FILE REQUIREMENTS 2017

Images should be at least 125-150 dpi at **FULL SIZE**

Custom Image File Requirement Specifics:

PR2424 24" x 24" Panels-

Minimum 2,500 Pixels X 2,500 Pixels; or if the image is 8" X 10" in size, then 300dpi typically .jpg format

PR2448 24" X 48" Panels-

Minimum 5,000 Pixels Wide X 2,500 Pixels High; or if the image is 8" X 10" in size, then 600dpi typically .jpg format

For Logos-

We prefer vector artwork that will resize without loss of quality. Typically Illustrator or .eps format

Our process **DOES NOT** require 300 dpi at **FULL SIZE** to get good results. We prefer RGB images vs. CMYK images.

NOTE- Low resolution images from the Internet are typically 72dpi and they **WILL NOT** enlarge without loss of quality. Do not attempt to reproduce logos taken from the Internet, unless they are high resolution or vector artwork.

A proof of custom image layout and cropping will be provided for customer approval prior to printing.

If you have any questions about file sizes please feel free to contact us we will be happy to verify your file.
