## Exciting News about **Prestyl™** brand of FAR Infrared Radiant Heating Panels.

**Background:** For many years now, I have been associated with PrestylUSA, manufacturers of “Best in Class” FAR Infrared Radiant Heating Panels as a Distributor/Dealer. The product is exceptional in both quality and performance so when the opportunity arose to form a new company and take over the manufacturing and production of these panels, I jumped on it. As of March 1st, 2019, the new company “Prestyl Energy Group, LLC will be moving to a new location in Spokane Valley, Washington and will resume production on or about June 1st, 2019.

I have been in the heating and air-conditioning business for over 40 years and have seen so called new and improved products come and go but never on this scale of both quality and energy efficiency. To put it mildly, this is the best heating product for homes, offices, warehouses and basically anywhere you need heat as opposed to traditional forced air or even warm floor hydronic heating systems. The only system that even comes close to being as energy efficient as these panels are is the GeoThermal type heat pump systems and are generally forced air where there are duct losses to contend with.

As there are a few radiant heating panel manufacturers out there, none can come close to our technology. Let’s face it, some of the technology available are what I call “toaster” technology. These panels use wire that is taped to the inside of the front panel using the wire as the heating element. In my opinion, this technology is prone to fail similar to the old incandescent light bulbs.

---

*“When it came time to decide on what brand of heating panels to use for our hot yoga studio, the decision was easy. Prestyl helped us with the design and instructed the electrician on how to install the panels. Prestyl even provided the thermostats and controls to operate the panels.”*

*Susan B. Tucson, Arizona*

---

- Advantages of **Prestyl** radiant heat panels:
- Competitively priced
- Outstanding quality
- Superior Limited Warranty
- Ability to modify the installation of the panels to meet customer’s needs.

cont.

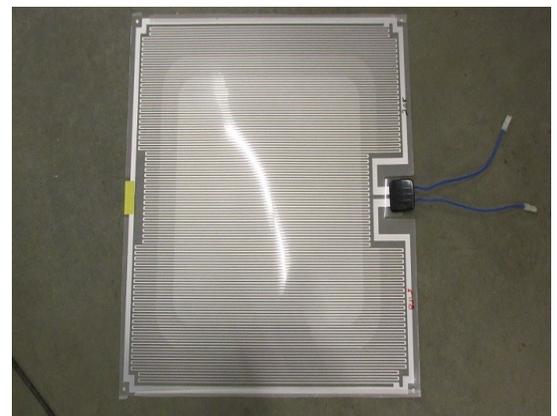

Other manufacturers use carbon crystal technology for their heating elements. As this technology is somewhat standard in the industry as well as panels produced in China, they come with certain issues such as over heating causing fires and damage to both ceilings and walls, unable to regulate the heating element to keep the temperature within the proper range to produce the FAR infrared wave lengths.

Our technology is based on the French thin film design similar to what is used on trains, automobiles, airplanes, etc. and is self regulating and does not require any type of thermal switch for heat regulation. The temperature is always maintained within the range for the production of FAR infrared invisible light waves. The panels do however have a high temperature limit switch for overheat protection.

## Healthy Heat

While some manufacturers discount the notion of FAR infrared having advantages for healing and other health benefits, numerous studies have shown the benefits of FAR infrared as having therapeutic properties that increase blood flow to certain areas of the body. FAR infrared has been around for hundreds of years as a solution to certain health issues. I did not write these studies and you can look them up by doing a search of the benefits of FAR infrared.

Our heating element

If it sounds like I am a little biased when it comes to describing our heating panels, you are right. There is nothing on the market that compares to our panels and that comes from being in the industry for as long as I have. I have looked at other panels with the possibility of being a representative and simply cannot, in good conscience sell these panels. Being part of the **Prestyl™** brand of heating panels allow me to sleep at night.

If you want a quality heating panel, then you need the **Prestyl™** brand of FAR infrared radiant heating
